Breast Cancer Awareness Month

Breast cancer is the most common cancer in pregnant and postpartum women and occurs most often between ages 32-38.

For women in the U.S., breast cancer death rates are higher than those for any other cancer, besides lung cancer.

As of January 2018, there are more than

3.1 Million

women with a history of breast cancer in the U.S. This includes women currently being treated and women who have finished treatment.

HOW MANY WOMEN WILL DEVELOP INVASIVE BREAST CANCER?

About 1 in 8 U.S. women (about 12.4%) will develop invasive breast cancer over the course of her lifetime.

CAN ONLY WOMEN BE DIAGNOSED WITH BREAST CANCER?

The American Cancer Society estimates for breast cancer in men in the United States for 2018 are: About 2,550 new cases of invasive breast cancer will be diagnosed; about 480 men will die from breast cancer.

Are you more likely to get breast cancer if a family member was diagnosed?

A woman's risk of breast cancer nearly doubles **x 2** if she has a first-degree relative (mother, sister, daughter) who has been diagnosed with breast cancer.
